

# Veer Sanyal

Sammamish, WA · 360-643-9424 · vsanyal@purdue.edu · linkedin.com/in/veersanyal · github.com/veer-sanyal

## Education

### Purdue University, Mitch Daniels School of Business

West Lafayette, IN

*B.S. Integrated Business and Engineering (IBE), Expected May 2028*

*Aug. 2024 – Present*

- Combined business and engineering curriculum. Coursework: Statistics, Engineering Design & Project Execution, Managerial Accounting.

## Projects

### STICK: AI-Powered Study Platform

2026 – Present

*Independent product build; sole developer and product decision-maker (React, TypeScript, Supabase)*

- Defined the product strategy, bounded AI steps over an open chatbot, and shipped a multi-step LLM pipeline (extract, classify, grade) on Deno edge functions that ingested a real 14-page, 12-question exam, all 12 auto-proposed answer keys matching the instructor's published key.
- Applied responsible-AI practice by placing a human review queue between the model and the student: 53 questions verified and 2 rejected, none left unreviewed, across 30 live topics, measured by direct database query.
- Root-caused a generation-quality failure, lifting question yield from 1/5 and 0/8 on consecutive runs to 8/8; added automated release gates after tracking 24+ defects manual review had missed.

### India MSME Digital-Trade Exposure Dashboard

github.com/veer-sanyal

*Sole builder, live for a policy researcher (Python, pandas, Plotly)*

2026

- Shipped a live tool that flags which of India's small-business service sectors are most exposed to a given digital-trade policy, with the central modeled-assumption caveat surfaced in the interface rather than buried.
- Instrumented the site with usage telemetry across five custom events to measure real use; computed every figure from WTO and Indian government source data rather than hardcoding, catching a published statistic off by roughly 3x.

## Experience

### Firmly

Remote

*Product and Engineering Intern*

*Jun. 2025 – Aug. 2025*

- Shipped a PayPal checkout failure-recovery flow end-to-end: defined the requirements with engineering and support, then partnered with senior engineers to replace a generic error page with a guided recovery flow across ~15 high-risk payment edge cases.
- Built and tracked product metrics (error rate, recovery rate) via server-side logging (Node.js/Express) to assess whether the fix worked; built a 20+ test-case QA workflow adopted as the team standard.

### Purdue Daniels School of Business Summer Externship

Remote

*Timeline & Project Manager*

*Jul. 2026 – Aug. 2026*

- Project-managed a 4-person consulting team for a ~\$1.6M nonprofit: ran discovery with the COO, set the delivery timeline, and delivered a 12-month event grid rebuilt as a 156-row dated posting calendar across 4 content types and 5 audiences.
- Audited the client's website and social presence with sourced screenshots, quantified a roughly 25x gap between best and worst content styles, and turned it into prioritized recommendations for a non-technical executive.

## Leadership & Activities

### Engineering Projects in Community Service (EPICS)

West Lafayette, IN

*Communications Officer & Build Lead*

*Aug. 2025 – Dec. 2025*

- Led a 7-person cross-functional team building a rotating museum billboard prototype; translated requirements into build specifications and presented design tradeoffs in two formal design reviews to faculty, sponsors, and museum stakeholders.

## Skills

**AI & Data:** LLM pipeline and prompt design, Gemini API, data modeling, evaluation datasets

**Product Analytics:** usage telemetry and custom event instrumentation, Plotly, KPI dashboarding

**Tools:** Python, HTML/CSS, Git/GitHub; React/TypeScript, Node.js, REST APIs, SQL/Postgres, Supabase (built with)
