Dear Hiring Manager:

I am writing to apply for the SAP iXp Intern position in Content Design & Product Storytelling for the Next Gen Commerce Cloud team. I am a sophomore at Purdue University studying Integrated Business and Engineering, and I am drawn to the Product-Led Growth team specifically because of its role in driving adoption through storytelling. SAP Commerce Cloud was just named a Leader in the 2025 Gartner Magic Quadrant for Digital Commerce, and with 171 new features shipped across 65 releases last year and a major on-premise-to-cloud migration wave underway, there is a real and growing need to communicate product value clearly to customers, partners, and internal stakeholders. I would bring product storytelling, video production, and cross-functional content coordination experience developed through internship work, a personal software project, and a video ad campaign.

As the sole developer of StudyFlowForge, a study platform built for Purdue students, I have practiced turning technical complexity into simple product narratives. The platform uses a multi-factor recommendation engine (spaced repetition, forgetting curves, exam readiness scoring), but the core user story had to be intuitive: “What should I practice next?” I designed and shipped 18 user-facing screens across study, onboarding, and analytics flows, ensuring a consistent narrative from first use through daily engagement. I also integrated AI-powered content generation using the Gemini API, which reduced manual content creation from hours to minutes, and authored structured product documentation (blueprints, SOPs) to keep cross-functional development aligned on roadmap updates. This experience parallels the Commerce Cloud team’s challenge of translating capabilities like the B2B Self-Service Portal or Open Payment Framework into content that resonates with non-technical buyers and decision-makers.

I also have hands-on experience with video production and visual storytelling. In 2024, I planned, scripted, filmed, and edited short-form video ads for a local restaurant using Adobe Premiere Pro and After Effects. I developed the ad copy and visual angles to showcase menu launches and brand identity for social media, and the videos accumulated over 660,000 views across platforms. Beyond video, my work as an Equity Research Analyst at Purdue’s Student Managed Investment Fund sharpened my ability to design structured, persuasive visual presentations: I built and delivered a 10-slide pitch deck to a 30+ member investment committee, distilling complex financial analysis into a clear visual narrative and refining the framing based on cross-functional feedback.

I am excited about the opportunity to contribute to the Product-Led Growth team’s content and storytelling efforts, especially as SAP Commerce Cloud continues to scale its AI capabilities and partner ecosystem. Thank you for your time and consideration. I would welcome the chance to discuss how I can support the team’s go-to-market content and product communication.

Sincerely,
Veer Sanyal
