Education

Purdue University, Mitch Daniels School of Business

B.S. Integrated Business and Engineering (IBE), Expected May 2028

West Lafayette, IN

Aug. 2024 – Present

- Combined business and engineering curriculum. Coursework: Statistics, Microeconomics, Financial Accounting, Engineering Design & Project Execution.

Experience

Student Managed Investment Fund

Equity Research Analyst

West Lafayette, IN

Jan. 2025 – Present

- Built a 3-statement model in Excel (DCF, comps, sensitivity analysis) for U.S. Bancorp in a ~\$400K AUM real-money portfolio; co-authored the 20-page report recommending Buy at a \$57.35 target, ~11.5% implied upside.
- Distilled segment-level analysis into a 10-slide pitch, presented the thesis to a 30+ member investment committee, defended the assumptions in live questioning, and refined the revenue and risk framing from what came back.

Firmly

Product and Engineering Intern

Remote

Jun. 2025 – Aug. 2025

- Shipped a PayPal checkout failure-recovery flow end-to-end: defined the requirements with engineering and support, then replaced a generic error page with a guided flow validated across ~15 high-risk payment edge cases.
- Instrumented the payment path with server-side error logging (Node.js/Express), then tracked error rate and recovery rate to judge whether the fix worked; built a 20+ test-case QA workflow adopted as the team standard.

Purdue Daniels School of Business Summer Externship

Timeline & Project Manager

Remote

Jul. 2026 – Aug. 2026

- Project-managed a 4-person consulting team for Scouting America, a ~\$1.6M nonprofit: ran discovery with the COO, set the timeline, and delivered a 156-row dated posting calendar built from its event grid across 4 content types and 5 audiences.
- Audited the client's website and social presence against sourced screenshots, quantified a roughly 25x performance gap between best and worst content styles, and turned it into prioritized recommendations for a non-technical executive.

Projects

STICK: AI-Powered Study Platform

Independent product build; sole developer of a deployed web app (React, TypeScript, Supabase)

2026 – Present

- Made bounded AI steps, not an open chatbot, the core product decision and shipped that pipeline on Deno edge functions; it read a real 14-page, 12-question exam and auto-proposed 12 of 12 answer keys matching the instructor's.
- Kept a human review queue over the model's output rather than shipping it directly (53 verified, 2 rejected, none unreviewed across 30 topics); root-caused a generation-quality failure that lifted question yield from 1/5 and 0/8 to 8/8.

India MSME Digital-Trade Exposure Dashboard

github.com/veer-sanyal/india-msme-digital-trade-exposure

Sole builder, live for a policy researcher (Python, pandas, Plotly)

2026 – Present

- Built a framework ranking which of India's small-business service sectors are most exposed to a given digital-trade policy, computing every figure from WTO and government source data, which surfaced a published statistic off by roughly 3x.

Leadership & Activities

Engineering Projects in Community Service (EPICS)

Communications Officer & Build Lead

West Lafayette, IN

Aug. 2025 – Dec. 2025

- Led a 7-person cross-functional team building a rotating museum billboard prototype; settled an 18 versus 22 prism decision on measured tolerance and manufacturability data, and presented the tradeoffs in two formal design reviews.

Skills

Quantitative & Modeling: Excel financial modeling, DCF, comps, sensitivity and scenario analysis, statistics

Data & Analytics: Usage telemetry and event instrumentation, KPI dashboarding, data visualization

Technical: Python, HTML/CSS, Git/GitHub; React/TypeScript, Node.js, SQL/Postgres, Plotly, Supabase (built with)
