Education

Purdue University — Mitch Daniels School of Business

West Lafayette, IN

B.S. Integrated Business and Engineering (IBE), Expected May 2028

Aug. 2024 – Present

- Integrated Business and Engineering: a joint business + engineering degree pairing product strategy with technical build.
- Relevant coursework: Statistics, Engineering Design & Project Execution, Managerial Accounting, Microeconomics.

Experience

Firmly (fintech / e-commerce platform)

Remote

Product and Engineering Intern

Jun. 2025 – Aug. 2025

- Investigated checkout failure pain points and shipped a PayPal failure-recovery flow end-to-end — defined requirements, validated the approach with senior engineers before build, and led it through design, launch, and refinement, replacing a generic error page with a guided recovery flow.
- Validated fixes across ~15 high-risk payment edge cases (missing billing/shipping data), building scalability, quality, and security considerations into the flow from the start.
- Built a repeatable QA workflow (edge-case matrix + release checklist, 20+ test cases) adopted as the team standard for fix verification; reduced “cannot reproduce” loops.
- Instrumented server-side error logging (Node.js/Express) and tracked error- and recovery-rate metrics, using the data to drive triage and iteration decisions.

Student Managed Investment Fund

West Lafayette, IN

Equity Research Analyst

Jan. 2025 – Present

- Researched U.S. Bancorp end-to-end (competitive landscape, revenue drivers, key risks) and built a 3-statement model in Excel (DCF, comps, sensitivity) within a ~\$400K AUM real-money fund; synthesized findings into a data-driven Buy recommendation.
- Co-authored a 20-page report and presented the thesis in a 10-slide pitch to a 30+ member investment committee, defending assumptions under live questioning.

Projects

StudyFlowForge — AI-Powered, Data-Driven Study Platform

React, TypeScript, Supabase (PostgreSQL), SQL, Gemini API

Feb. 2026 – Present

- Defined strategy and roadmap and shipped 18 user-facing screens end-to-end as sole developer, running 4 build-measure iterations grounded in user research on students’ fragmented study workflows.
- Designed SQL schemas and queries on a Supabase (PostgreSQL) backend powering React/TypeScript dashboards that surface mastery, retention, and at-risk metrics for data-driven prioritization.
- Integrated LLM-based prioritization (Gemini API) to generate personalized study plans from course-calendar data, and used AI development tools (Claude Code) throughout the build to iterate faster.

Leadership & Activities

Engineering Projects in Community Service (EPICS)

West Lafayette, IN

Communications Officer & Build Lead

Aug. 2025 – Dec. 2025

- Led a 7-person cross-functional team; translated requirements into build specs, made data-informed design tradeoffs (18 vs. 22 prisms), and presented in two formal reviews to faculty, sponsors, and museum stakeholders.

Skills

Product & Strategy: Product requirements & PRDs, roadmapping, customer discovery, prototyping & validation, success metrics, competitive analysis

Data & Analytics: SQL schema design, PostgreSQL, KPI dashboards, data-driven decision-making, A/B testing fundamentals, Excel modeling (DCF)

AI & Development: LLM / Gemini API integration, Claude Code (AI-assisted development), Python, Git/GitHub
