Hiring Manager
Kenworth Truck Company, PACCAR Inc.
Kirkland, WA 98033

Dear Hiring Manager:

I am writing to apply for the Summer 2026 Materials Planner Intern position with Kenworth's Materials team. I am a sophomore at Purdue University studying Integrated Business and Engineering, graduating in May 2028. Kenworth's role in PACCAR's supply chain is especially compelling right now: with new battery-electric models entering production in 2026 and strong order momentum heading into a pivotal year for the truck market, materials planning sits at the center of how Kenworth delivers on its commitments to customers. I would bring (1) cross-functional coordination experience from internship and project work, (2) structured analytical workflows developed through financial research and QA process design, and (3) clear, detail-oriented communication practiced across engineering, finance, and product teams.

During my internship at a software company last summer, I coordinated across engineering, product, and support teams to ship a checkout failure-recovery flow for PayPal transactions. I owned the process of clarifying requirements with stakeholders, validating high-risk edge cases, and writing handoff notes that documented status, risks, and escalation paths so nothing fell through the cracks as the feature moved through development and release. I also built a repeatable QA workflow (edge-case matrix and release checklist) that reduced "can't reproduce" loops across multiple releases. This experience maps directly to the Materials Planner role's need to coordinate with Purchasing, Engineering, and suppliers while maintaining the planning databases and exception reports that keep production on track.

I have also developed structured analysis and stakeholder communication skills through two other experiences. As an analyst in Purdue's Student Managed Investment Fund (~\$400K AUM), I co-authored a 20-page equity research report on U.S. Bancorp, owning the competitive landscape, risk assessment, and portfolio strategy sections and defending my assumptions in weekly team discussions. As build lead for an Engineering Projects in Community Service (EPICS) team, I planned assembly steps for a seven-person build, ran engineering checks on dimensions and tolerances that informed key manufacturing decisions, and presented tradeoffs and next steps to faculty and sponsors in two formal design reviews. Both experiences required balancing multiple priorities with attention to detail, synthesizing data into actionable outputs, and communicating findings to diverse stakeholders, all of which map to issuing purchase orders, analyzing surplus and obsolete materials, and coordinating engineering change notices for Kenworth's Materials team.

I am excited about the opportunity to contribute to Kenworth's supply chain operations during a period of meaningful product-line growth and to learn firsthand how materials planning supports manufacturing at the scale of a Fortune 500 leader. Thank you for your time and consideration. I would welcome the chance to discuss how I can support your Materials team this summer and can be reached at 360-643-9424 or vsanyal@purdue.edu.

Sincerely,

Veer Sanyal
