

Veer Sanyal

Sammamish, WA | 360-643-9424 | vsanyal@purdue.edu | linkedin.com/in/veersanyal | github.com/veer-sanyal

Builder focused on commerce and small-business products. Ships, instruments, and iterates real tools end-to-end.

Education

Purdue University, Mitch Daniels School of Business

B.S. Integrated Business and Engineering (IBE), Expected May 2028

West Lafayette, IN

Aug. 2024 -- Present

- Selective hybrid of a full business core and an engineering curriculum. Coursework: Statistics, Engineering Design, Managerial Accounting, Microeconomics.

Projects

India MSME Digital-Trade Exposure Dashboard

Solo build; live for a policy-research user

May 2026 -- Present

Static HTML/CSS, Plotly, Python

- Built and shipped a live tool that flags which of India's small businesses (MSMEs) are most exposed to digital-trade policy, so a researcher can ground the call in data rather than guesswork; scoped and iterated it end-to-end over 8+ weeks against a public decision log.
- Constructed a transparent exposure index from public WTO and Indian government (MoMSME Udyam) data, every proxy labeled and linked to source, and surfaced the central modeled-assumption caveat directly in the interface rather than burying it.
- Instrumented the live site with usage telemetry (custom event tracking) to measure how the tool is actually used; computed every figure from source data instead of hardcoding (caught a published statistic off by $\sim 3x$). Built with AI-assisted development (Claude Code).

StudyFlowForge: AI-Powered Study Planner

Sole developer

Feb. 2026 -- Apr. 2026

React, TypeScript, Supabase, Gemini API

- Scoped and shipped 18 user-facing screens end-to-end as sole developer for students with fragmented study workflows; integrated an LLM (Gemini API) to generate personalized plans and built a multi-factor scoring model (spaced repetition, forgetting-curve decay) in TypeScript.

Experience

Firmly (Fintech / E-commerce Platform)

Product & Engineering Intern

Remote

Jun. 2025 -- Aug. 2025

- Shipped a PayPal checkout failure-recovery flow end-to-end for an e-commerce payments product; defined requirements, partnered with senior engineers, and validated fixes across ~ 15 high-risk payment edge cases, replacing a dead-end error page with a guided recovery flow.
- Built a repeatable QA workflow (edge-case matrix + release checklist, 20+ cases) adopted as the team standard and still used after the internship ended; added server-side error logging (Node.js/Express) that improved incident triage, and tracked error and recovery rates to inform decisions.

Student Managed Investment Fund (SMIF)

Equity Research Analyst

West Lafayette, IN

Jan. 2025 -- Present

- Researched a public company end-to-end in a $\sim \$400K$ real-money portfolio and co-authored a 20-page report; distilled it into a 10-slide pitch and presented the thesis to a 30+ member committee, defending assumptions in live questioning.

Leadership & Community

Engineering Projects in Community Service (EPICS)

Communications Officer & Build Lead

West Lafayette, IN

Aug. 2025 -- Dec. 2025

- Led the build of a working display prototype for a local museum through Purdue's service-learning program; coordinated a 7-person team and kept faculty sponsors and the client aligned across the semester, presenting decisions in two formal reviews to non-technical stakeholders.

Skills

Languages & tools: Python, HTML/CSS, Git/GitHub

Built with (AI-assisted): React, TypeScript, Node.js/Express, SQL/PostgreSQL, REST APIs, Gemini API, Plotly

Product & workflow: Product scoping & spec writing, user/market research, KPI dashboarding, telemetry instrumentation, QA/verification, presenting to non-technical audiences
